

NanoTech Materials TPO Primer

Single-Ply Primer

DESCRIPTION:

NanoTech Materials TPO Primer is a primer designed to enhance adhesion to stainless steel, aluminum, copper, concrete, and weathered single-ply roofing systems. It is particularly recommended for improving adhesion to NanoTech Materials Cool Roof Base Coat when applied over new TPO surfaces.

APPLICATION:

- While various application methods can be used, spray application is preferred due to the fast-drying nature of the product.
- The surface should be free of heavy dirt, dust, or oils. If cleaning is required, ensure the surface is dry before applying the primer.
- Apply the primer to achieve a dry film thickness of 1-2 mils. If corrosion is an issue, increase the thickness to 3-4 mils.

COVERAGE:

300-400 square feet per gallon.

STORAGE:

Protected from sunlight between 40°F and 80°F.

PACKAGING

- 5-gallon pail
- 55-gallon drum

CAUTION:

Avoid prolonged contact with skin or breathing of vapors. Provide adequate ventilation.
